# Take steps to protect your health:

## **Be aware of the effects of exposure to mold during the clean up process.**

- Common reactions to mold are cough, congestion, runny nose, burning eyes, headaches, sneezing and sore throat.
- Children, pregnant women, older people and people with weakened immune systems may be more sensitive to mold than others.
- Signs of indoor mold growth include staining on surfaces, a musty odor, dark spots on or around vents, water stains and peeling or curling of vinyl floors or wallpaper.

## **Take mosquito bite precautions while conducting flood clean up.**

- Remove flood-water debris on and around your property.
- Empty or drain potted plant bases, tires, buckets or containers, and roof gutters.
- Drain any pooled rainwater or floodwater that may have collected in containers around your property.
- Be sure to wear insect repellent.
- Wear long sleeves and pants while conducting flood clean up.
- Dispose of potential mosquito breeding sites by emptying stagnant pools of water around your house and yard, if possible.

## **Never use generators and charcoal or gas grills inside your home, basements, garages, or other enclosed spaces due to the risk of carbon monoxide poisoning.**

- Residents should not operate these appliances near an open window or window air conditioner which may allow fumes to enter the home.
- The most common symptoms of CO poisoning are headache, dizziness, weakness, nausea, vomiting, chest pain, and altered mental status.

## **Use caution and be aware of the risk of chain saw injury during tree or debris removal.**

- Wear a hard hat, safety glasses, ear plugs, thick work gloves, chaps, and boots.
- Trees entangled in power lines must be deferred to the local power company.

## **Take precautions while beginning clean up to reduce injury and illness.**

- While working, keep hands away from mouth and face.
- Disinfect all wounds and dress them immediately.
- Wear protective clothing (rubber boots, rubber gloves and eye protection).
- Wash hands often using clean water and soap.

## **Check immunization status to ensure you are protected against tetanus.**

- Tetanus is preventable by making sure a person is up to date on their tetanus immunization.
- This is done by getting a tetanus booster every 10 years.
- For persons with a wound that has been exposed to flood water, the recommended interval between doses of tetanus-containing vaccine should be shortened from 10 years to 5 years.

## **Use caution when using food following power outages or after being exposed to flood waters.**

- All fresh fruits and vegetables, including home garden produce, should be destroyed.
- Foods such as cereals, bakery goods, dried fruits, flour, frozen foods, sugar, salt and similar foods in paper or plastic containers or wrapping should be destroyed.
- All meats, including fresh, dried, frozen and home canned should be destroyed.
