Influenza Sentinel Provider Surveillance

...In Only a Few Minutes a Week!

What is an influenza sentinel provider?

An influenza sentinel provider conducts surveillance for influenza-like illness (ILI) in collaboration with the state health department and the Centers for Disease Control and Prevention. Data reported by sentinel providers, in combination with other influenza surveillance data, provide a national picture of influenza virus and ILI activity in the U.S. Approximately 2,700 providers in all 50 states were enrolled in this network during the 2008 - 2009 influenza season.

What data do sentinel providers collect? How and to whom are they reported?

Sentinel providers report the total number of patient visits each week and number of patient visits for influenza-like illness by age group (0-4 years, 5-24 years, 25-64 years, ≥ 65 years). These data are transmitted once a week via the Internet, a touch-tone telephone, or fax to a central data repository at CDC. Most providers report that it takes them

10 minutes a week to compile and report their data. In addition, sentinel providers can submit specimens from a subset of patients for virus isolation **free of charge**.

Who can be an Influenza Sentinel Provider?

Providers of any specialty (e.g., family physicians, internists, pediatricians) in any type of practice (e.g., private practice, public health clinic, urgent care center, emergency room, student health center) are eligible to be influenza sentinel providers.

Why Volunteer?

Influenza viruses are constantly evolving and cause substantial morbidity and mortality (approximately 20,000 deaths) almost every winter. The data sentinel providers provide are critical for monitoring the impact of influenza and, when combined with other influenza surveillance data, can be used to guide prevention and control activities, vaccine strain selection, and patient care. Sentinel providers receive feedback on the data submitted, summaries of regional and national influenza data, and a free subscription to CDC's Morbidity and Mortality Weekly Report and Emerging Infectious Diseases journal. The most important consideration is that the data provided are critical for protecting the public's health..

For more information on Influenza Sentinel Provider Surveillance, please contact your state influenza surveillance coordinator at 1-800-423-1271
