Percentage of Acute Hepatitis B Cases with Complete Information — WV, 2007-2011 By Region

<u>Indicator</u>	West Virginia	Region 1	Region 2	Region 3	Region 4	Region 5	Region 6	Region 7	Region 8
<u>Percentage of Acute Hepatitis B who are lost to follow up</u>									
Lost to follow up...? (answered yes)	13%	6%	15%	21%	*	11%	20%	6%	24%

* Unable to calculate a percentage due to missing information

Strengths

- Baseline data from which we can begin to develop a plan to improve indicator completeness

Limitations

- Some counties reported no cases or very few cases
- It is unclear if the answer unknown means that the health department does not know the answer to the question because they were unable to interview the patient or if the patient does not know the answer to the question
- Data is from 2007 to 2011 and was collected using the old WVEDSS database and it may be difficult to compare with the new WVEDSS
-

Recommendations

- Missing or unknown or blank viewed as an incomplete response
- Document education provided to the patient
- Document when the patient is lost to follow up
- State resources that are available to assist with investigations
 - State Hepatitis B Epidemiologist
 - Perinatal Hepatitis B Coordinator
 - Disease Investigation Specialists
